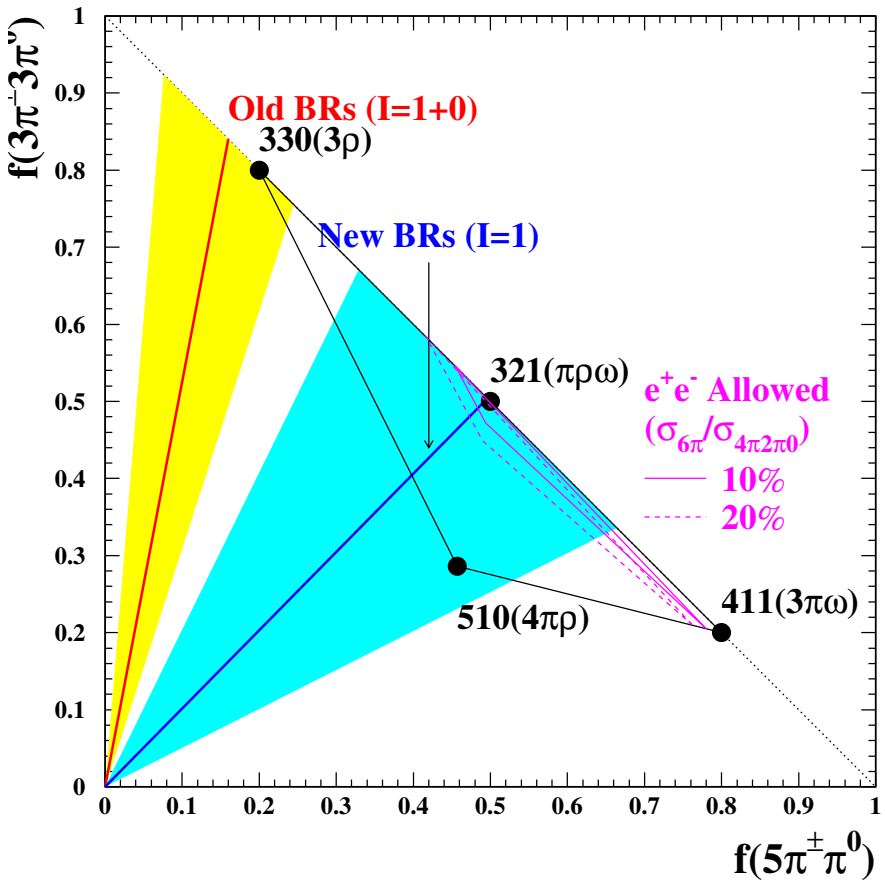
2) Comparison of τ & $e^+e^- \to 6\pi \Rightarrow$ Inconsistencies

- CVC: $e^+e^- \to 6\pi(I=1) \Leftrightarrow \tau \to 6\pi(I=1)$
- Isospin: Constr. f's of Specific Final States



What Happened?

- $3\pi^{\pm}3\pi^0$ BR shifted significantly
- Old $3\pi^{\pm}3\pi^0$, $5\pi^{\pm}\pi^0$ Meas's not corrected for I=0 component
  ($3\pi^{\pm}\eta$,$\pi^{\pm}2\pi^0\eta$ are I=0)
