Conclusion

Helium-Based Gas:

- 10 years of studies
- He-C_3H_8 works *very* well for CLEOII.5
- Improves things *in addition to* multiple scattering.
- Lower Lorentz-angle is quite important.

B-Factory Drift Chambers:

- Many similarities
- Many differences
- Some distinctive endplate/cylinder constructions
- Range of radial extent
- Wide variety of cathode choices
- Different stereo layer choices
- Plan to use 3 different gases

Wait and see real performances...
